BREAKDOWN

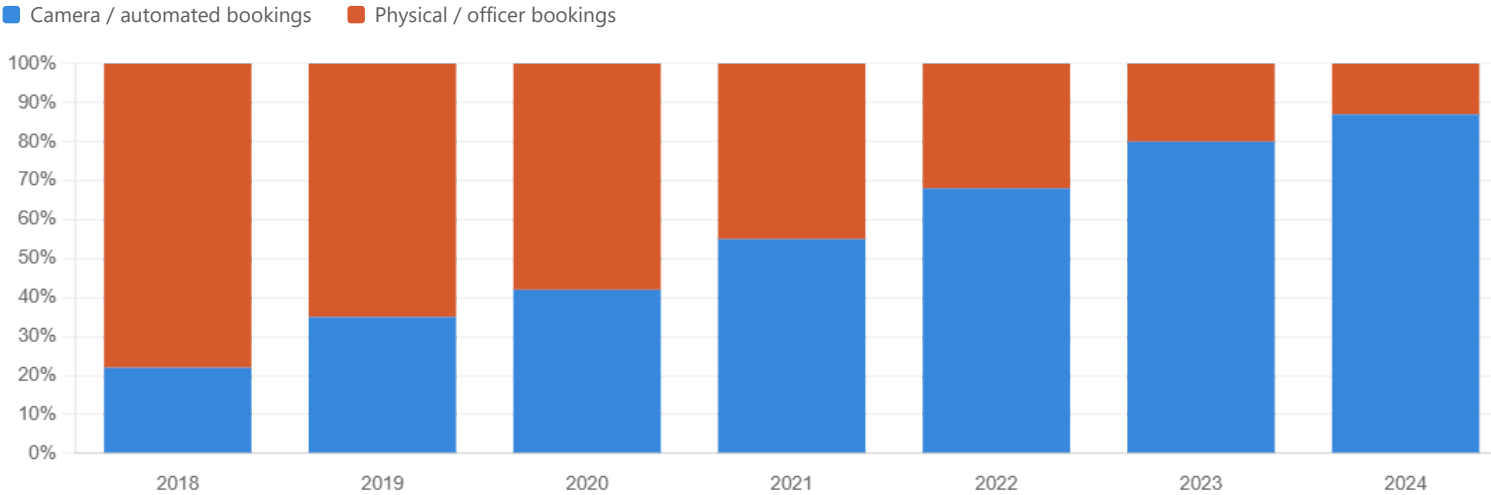

Top 10 violation types · 2024

Violation	Share	Mode
No helmet (rider)	50%	Camera
No helmet (pillion)	14%	Camera
Wrong parking	8%	Mixed
Signal jumping	7%	Camera
No entry / wrong side	5%	Officer
Overspeeding	4%	Camera
No seatbelt	3%	Camera
Driving w/o licence	2%	Officer
Drunk driving	1%	Officer
Mobile use / other	1%	Officer
Others	5%	Mixed

TREND

Automation vs physical enforcement · 2018–2024

Figures are indicative proportions based on BTP enforcement trend data. Absolute case volumes vary by year.

Six categories of violations

Category A

Protective gear violations

Helmet & seatbelt offences. Riding without a helmet accounted for ~64% of all booked violations in 2024. The number of helmetless bookings more than doubled from 2018 to 2022, driven entirely by CCTV automation.

Highest volume

Category B

Parking & lane violations

Wrong/illegal parking is the second most booked violation category, crossing one million cases in some years. No-entry violations are one of the few categories where physical booking still dominates over automation.

High volume

Category C

Signal & right-of-way

Signal-jumping has crossed one million bookings in peak years and is predominantly camera-detected. Wrong-side driving caused 9,094 road fatalities nationally in 2022 (5.4% of all road accidents).

Deadly risk

Category D

Speed violations

Interceptor jeeps disappeared from Bengaluru's roads in 2023. Automated speed cameras partially fill the gap. Nationally, speeding causes over 60% of road accidents (MoRTH 2023).

Leading fatality cause

Category E

Impaired & distracted driving

Drunk driving and mobile-phone use while driving are almost entirely physically-booked offences. Drunk driving bookings in 2024 are a fraction of 2018 levels — not because incidence fell, but because fewer officers are available.

Critical enforcement gap

Category F

Documentation violations

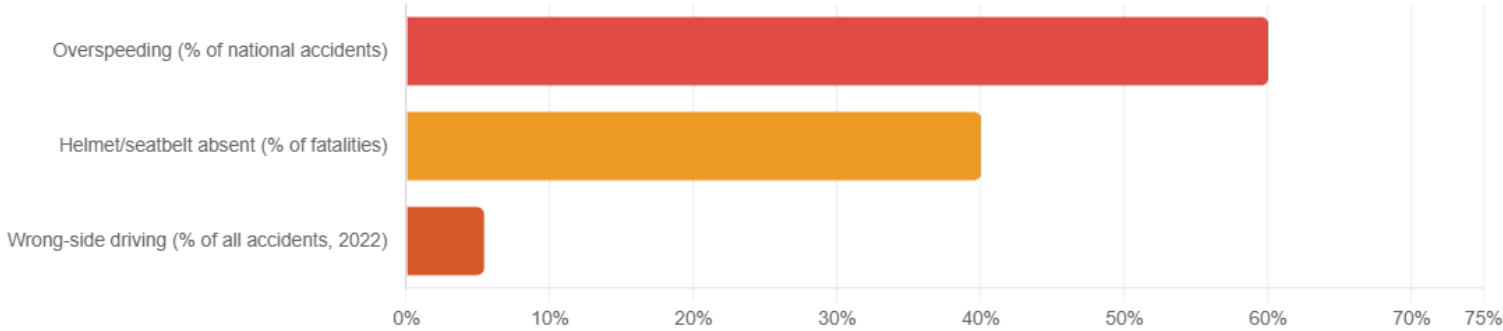

Driving without a valid licence, without valid insurance, or with an unregistered vehicle. Underage driving is categorised here; nationally 11,890 accidents in 2023–24 were caused by minors (avg. 16/day, MoRTH data).

Significant portion

ROAD SAFETY IMPACT

Fatal crash indicators

Bengaluru recorded **921 road deaths in 2023** — the highest in a decade and a **19% rise** over 2022. The North Division alone accounted for more than one-third of all fatal crashes. Motorcyclists and pedestrians remain the most vulnerable groups.

POLICY RECOMMENDATIONS

Structural reforms needed

- 1 Restore physical enforcement of high-risk violations: drunk driving, speeding, and reckless driving.
- 2 Re-deploy Interceptor jeeps or equivalent speed-gun technology for on-road speed enforcement.
- 3 Implement automated challan recovery — suspend vehicle registration renewal for unpaid violations above a threshold.
- 4 Expand traffic police strength proportionate to vehicle population growth (currently <5,000 for 1.2 Cr vehicles).
- 5 Prioritise enforcement resources toward speed and impairment rather than helmet/seatbelt automation alone.
